Professional Summary

Senior QA Engineer with 7+ years of experience delivering high-quality software across fintech, maritime technology, and enterprise learning platforms. Proven expertise in test automation, API testing, and CI/CD pipeline integration. Experienced leading cross-functional QA teams and significantly reducing production defect leakage. Adept at Agile/Scrum environments with a track record of stakeholder communication and go/no-go decision-making.

Skills and Tools

Testing Management: Jira, Qase.io, Zephyr
CI/CD & Debugging: Jenkins, Chrome DevTools
Programming Languages: Python, JavaScript
API Testing: Postman, Swagger
Test Automation: Selenium, Appium, Playwright, Robot Framework
Testing Types: Functional, Non-Functional, Acceptance, Smoke, E2E, and Regression testing.
Methodologies: Agile/Scrum, SDLC, STLC

Key Achievements

- Built standardized testing processes to improve efficiency and ensure consistent software quality.
- Developed an automation framework that reduced testing time by 40%, improving testing efficiency.
- Optimized API testing coverage, improving reliability and stability across multiple projects.

Key Responsibilities

- Collaborate with scrum masters, product managers, and developers throughout the project workflow
- Develop and execute test plans, test cases, and acceptance testing across multiple platforms
- Perform manual testing (functional, regression, integration, UAT) to ensure release-ready quality
- Build automation testing frameworks, selecting scalable and maintainable tools
- Identify, document, and track defects; work with developers to reproduce issues and verify fixes
- Act as liaison between development teams, product owners, and stakeholders to uphold quality standards
- Lead and mentor QA team members, assigning tasks and enforcing best practices
- Maintain test records, including results, defect logs, and coverage reports
- Coordinate cross-functional and vendor testing activities, ensuring environment and data readiness

Professional Experience

Senior Software Tester - NTUC LearningHub

Singapore | 2025 – Present (Remote)

Leading Continuing Education and Training provider in Singapore, transforming lifelong employability of working people; has helped over 34,000 organisations and achieved more than 3.2 million training places since 2004.

- Coordinated daily/weekly testing activities across multiple teams to meet project timelines
- Assigned and managed vendor test scenarios based on tester skill, workload, and priority
- Led daily progress tracking, prepared test execution dashboards including burndown charts for monitoring completion rate, and delivered status updates
- Consolidated defects, prepared clear reports, and coordinated closely with vendor teams
- Tracked testing progress, maintained dashboards/burndown charts, and reported status to stakeholders
- Identified and escalated risks, blockers, and environment issues proactively
- Ensured test environment readiness, access, and test data availability
- Supported UAT, guided business users, and produced Test Summary Reports with release readiness insights

Senior QA Engineer - Anglo-Eastern

Kowloon, Hong Kong | 2024 - 2025 (Remote)

Provides comprehensive ship management services for a diverse global fleet, including a client portal website used by all company clients.

- Understood meeting workflows and collaborated closely with scrum masters and developers
- Developed and executed detailed test plans, test cases, and acceptance testing across various platforms
- Led development and implementation of the automation testing framework, selecting appropriate tools and technologies for scalable, maintainable, and effective tests
- Identified, documented, and tracked defects, working closely with developers to reproduce issues and verify fixes
- Acted as liaison between development teams, product owners, and stakeholders, ensuring quality standards throughout the software development lifecycle
- Led Go/No-Go meetings, communicated sprint goals, and detailed the impact level of each bug ticket to the product manager

QA Engineer - Undercurrent Capital Pte Ltd

138 Robinson Road, Singapore | 2022 – 2024 (Remote)

IT consulting firm specializing in blockchain and Web3 smart contracts, handling project-based work (Foundry Safe, Safe website) and client-based projects (Opulous, Messina, K-Prime).

- Wrote and maintained automation testing
- Developed and executed test plans and test cases across multiple platforms, covering functional, regression, integration, and user acceptance testing
- Tested staking and withdrawal functionality and wallet features for blockchain/Web3 products
- Reproduced issues, identified root causes, and worked closely with developers to verify fixes
- Ensured the product met all specification requirements and maintained quality on the production server
- Maintained detailed records of test activities, including test results, defect logs, and test coverage reports
- Reviewed and verified design consistency between Figma designs and browser DevTools

QA Team Lead - Grip Principle Pte Ltd

Batam, Indonesia | 2021 – 2022 (Hybrid)

IT consulting firm specializing in project-based work (Grip Learning) and client-based projects (Smart Apes, Gramedia, Trading Bots, Gaming Blockchain, DAP Logistic, and others).

- Led, mentored, and supported a team of QA engineers; assigned tasks and monitored performance
- Conducted regular performance reviews and provided constructive feedback
- Designed and enforced QA best practices for automation, manual testing, and continuous integration
- Led test planning activities, including defining test objectives, scope, approach, and resource requirements
- Collaborated closely with developers, designers, and product owners to understand requirements and potential risks
- Generated regular status reports on test progress, execution, and defect trends for management and stakeholders

Software Tester - PT TEC Indonesia

Batam, Indonesia | 2018 – 2020 (Onsite)

Japanese manufacturing firm engaged in the production of electronic equipment, particularly printers.

- Analyzed requirements by collaborating closely with developers during meetings
- Developed and executed test plans, covering functional, regression, integration, and user acceptance testing
- Investigated client-reported issues by reproducing problems and identifying root causes
- Ensured the product met all specification requirements across each firmware version
- Reported issues directly to development engineers to speed up the investigation process

Education

Bachelor's Degree in Information Systems

Putera Batam University | 2013 - 2017

Thesis: Web-based Material Inventory System at PT HLN Batam
